

# JADEN HARDING

## About Me

I am currently a final year student at the North-West University in Potchefstroom. I am passionate about web and app development. Thus far in my studies I was part of developing a functional point of sale system for a team project and a full-stack website for an individual project, making use of GitHub for source control.

# Personal Information

GitHub for source control:  
*Used in team and individual projects.*

# Github Projects

## **Picture-Website**

A full stack website that allows users to register or login and once logged in, upload photos, and then download, delete and update those photos. Further allows users to share photos with other users in the database. The technology stack used is Angular, NodeJS and MySQL.

## **Portfolio-Website**

A front-end based website, that acts as a CV. The technology stack used is Angular, along with its Material library and Node.js which is used to connect to GitHub's API and display projects on the website.

## **CMPG223-POS**

A functional point of sale system for a local brewery. Employees can use the application to place new orders, sign up customers, check stock, add new employees, buy inventory and request reports. The technology stack that was used was C# and Sql server.
